JOHNEX explosives

• Recommendation For Use (RFU)

MEGADRIVE®

Water Resistant Cartridged Emulsion Explosive

JOHNEX MEGADRIVE® is a water resistant cartridged emulsion explosive that can be primed with a detonator or with detonating cord.

Recommendation for Use

STEP-BY-STEP

1

When using a detonator, start by inserting the plastic detonator skewer (which is supplied in each box) into the cartridge end and along the central axis of the charge.

2

Then insert the detonator into the cavity created by the plastic skewer.

3

Secure the detonator lead to the cartridge using one or more half-hitch knots or electrical tape.

4

When using detonating cord, thread the cord carefully through at least two cross-cutting holes made with the skewer, attach the cord to the cartridge with electrical tape (starting and finishing at the top) before securing the cord to itself (by knot or tape).

WARNING - EXPLOSIVES: AUTHORISED PERSONNEL ONLY

Explosives must only be handled, transported, stored and used by trained, competent persons who hold the appropriate licence or authorisation under applicable Commonwealth, State or Territory legislation. Always follow site blasting procedures, the product Safety Data Sheet and the manufacturer's instructions.
